

TABLE OF CONTENTS

PHYSICS, BIOPHYSICS, AND RISK ESTIMATION

Technical Characteristics of the Columbia University Single-Ion Microbeam	1
Gerhard Randers-Pehrson, Charles R. Geard, Gary W. Johnson, and David J. Brenner	
Electrostatic Lens Design for the Columbia Microbeam	5
Alexander D. Dymnikov, David J. Brenner, Gary Johnson, and Gerhard Randers-Pehrson	
The Low-Energy Neutron Facility	10
Stephen A. Marino, Dusan Srdoc, and Gary W. Johnson	
Risks from Less than 10 Millisievert: What Do We Really Know? How Can We Learn More?	15
David J. Brenner	
The Risk of Fatal Cancer from Pediatric Computed Tomography	19
David J. Brenner, Carl D. Elliston, Eric J. Hall, and Walter E. Berdon (Department of Radiology, Columbia University)	
A Polymer, Random Walk Model for the Size-Distribution of Large DNA Fragments After High-LET Radiation	21
David J. Brenner, with Artem Ponomarev and Rainer Sachs (both from the Univeristy of California/Berkeley), and Lynn Hlatky, (Harvard Medical School)	
MICROBEAM: CELLULAR STUDIES	
Induction of a Bystander Mutagenic Effect of Alpha Particles on Mammalian Cells	23
Hongning Zhou, Gerhard Randers-Pehrson, and Tom K. Hei	
Intra- and Inter-Cellular Reponses Following Cell-Site-Specific Microbeam Irradiation	26
Charles R. Geard, Gerhard Randers-Pehrson, Stephen A. Marino, Gloria Jenkins-Baker, Tom K. Hei, Eric J. Hall, and David J. Brenner	

Single Alpha-Particle Traversals and Tumor Promoters	28
Richard C. Miller, Satin Sawant, Gerhard Randers-Pehrson, Stephen A. Marino, Charles R. Geard, Eric J. Hall, and David J. Brenner	
Bystander Effect of Radiation on Oncogenic Transformation	30
Satin G. Sawant, Gerhard Randers-Pehrson, Charles R. Geard, and Eric J. Hall	
Role of Oxyradicals in DNA Damage Induced by Cytoplasmic Irradiation in Mammalian Cells	32
An Xu, Gerhard Randers-Pehrson, and Tom K. Hei	
CELLULAR STUDIES	
RBE and Microdosimetry of Low-Energy X Rays	35
Stephen A. Marino, Dusan Srdoc, Satin Sawant, Charles R. Geard, and David J. Brenner, in collaboration with Zugen Fu (SUNY/ Stonybrook)	
Establishment of an Alpha-Particle-Induced Estrogen-Dependent Breast Cancer Model	40
Gloria M. Calaf and Tom K. Hei	
Genotoxicity Versus Carcinogenicity: Implications From Fiber Toxicity Studies	42
Tom K. Hei, An Xu, Darren Louie, and Yong-Liang Zhao	
Induction of Reactive Oxygen Species by Crocidolite Asbestos in Mammalian Cells	46
An Xu and Tom K. Hei	
Focal Adhesion Motility Revealed in Stationary Fibroblasts	49
Lubomir B. Smilenov with Alexei Mikhailov (Massachusetts General Hospital), and Robert J. Pelham, Jr., Eugene E. Marcantonio, and Gregg G. Gundersen (Departments of Pathology and Anatomy and Cell Biology, Columbia University)	
Transformation of Human Bronchial Epithelial Cells by the Tobacco-Specific N-Nitrosamine, NNK	52
Hongning Zhou and Tom K. Hei	
Protein Expression in Tumorigenic Human Breast Epithelial Cells Transformed by Alpha Particles	54
Gloria M. Calaf and Tom K. Hei	

Microsatellite Instability in Tumorigenic Human Bronchial Epithelial Cells Induced by Alpha Particles and Fe-56 Ions	57
Chang Q. Piao and Tom K. Hei	
Malignant Transformation of Human Bronchial Epithelial Cells by Arsenite	60
Chang Q. Piao and Tom K. Hei	
Radon, Arsenic, and Mutagenesis	62
Su X. Liu and Tom K. Hei	
CYTOGENETIC STUDIES	
Chromosomal Aberrations in Tumorigenic Human Bronchial Epithelial Cells Transformed by Chrysolite Asbestos	65
Masao Suzuki, Chang-Qing Piao, and Tom K. Hei	
Cytogenetic Effects of Heavy-Ion Beams in Normal Human Bronchial Epithelial Cells	67
Masao Suzuki, Chang-Qing Piao, and Tom K. Hei	
MOLECULAR STUDIES: CELL-CYCLE CHECKPOINTS	
Physical Interactions Among Human Checkpoint Control Proteins HHUS1p, HRAD1p, and HRAD9p, and Implications for the Regulation of Cell-Cycle Progression	70
Haiying Hang and Howard B. Lieberman	
Two-Hybrid Interactions Between the Human HRAD9p Checkpoint Control Protein and the Tumor Suppressor p53	72
Sarah J. Rauth, Wei Zheng, and Howard B. Lieberman	
Defective G2 Checkpoint by Inactivation of 14-3-3σ Gene Influences Telomere Function	73
Sonu Dhar, Jain Kaung (University of Texas), Jeremy A. Squire (University of Toronto), Charles R. Geard, Raymund J. Wellinger (Universite de Sherbrooke), and Tej K. Pandita	

MOLECULAR STUDIES: DAMAGE RESPONSIVENESS

Ionizing Radiation Activates ATM Kinase Throughout the Cell Cycle	76
Tej K. Pandita, Howard B. Lieberman, Dae-Sik Lim (St. Jude's Children's Research Hospital), Sonu Dhar, Wei Zhen, Yoichi Taya (National Cancer Center Research Institute, Japan), and Michael B. Kastan (St. Jude's Children's Research Hospital)	
Ataxia Telangiectasia: Chronic Activation of Damage-Responsive Functions is Reduced by Alpha-Lipoic Acid	80
Magtoub Gatei (Queensland Institute of Medical Research), Dganit Shkedy (Tel Aviv University), Kum Kum Khanna (QIMR), Tamar Uziel (TAU), Yosef Shiloh (TAU), Tej K. Pandita, Martin F. Lavin (QIMR), and Galit Rotman (TAU)	
Activation of Abl Tyrosine Kinase by Ionizing Radiation Requires ATM But Not DNA-PK	82
Sanjeev Shangary and Tamara Lataxes (both from the University of Pittsburgh Medical Center), Tej K. Pandita, Guillermo E. Taccioli (Boston University), and R. Baskaran (UPMC)	
Atm Inactivation Results in Aberrant Telomere Clustering During Meiotic Prophase1	84
Tej K. Pandita, Christoph H. Westphal (Harvard Medical School), Melanie Anger (University of Kaiserslautern), Satin G. Sawant, Charles R. Geard, Raj K. Pandita (Albert Einstein College of Medicine), and Harry Scherthan (Univ. of Kaiserslautern)	
Influence of ATM Function on Telomere Chromatin Structure	88
Lubomir Smilenov, Sonu Dhar, and Tej K. Pandita	
Expression of the Catalytic Subunit of Telomerase in Developing Brain Neurons: Evidence for a Cell-Survival-Promoting Function	94
Weiming Fu, Michael Killen, and Carsten Culmsee (all from Sanders Brown Research Center on Aging, University of Kentucky), Sonu Dhar, Tej K. Pandita, and Mark P. Mattson (SBRCA)	

The Human Homologue of <i>Schizosaccharomyces pombe</i> Rad9 protein, HRAD9p, Interacts with Bcl-2/Bcl-x_L and Promotes Apoptosis	95
Howard B. Lieberman, Haiying Hang, Kevin Hopkins, and Wei Zheng, in collaboration with Kiyoshi Komatsu (University of South Florida College of Medicine), Toshiyuki Miyashita (National Children's Research Center, Japan), Sandy Cuddeback (USFCOM), Masao Yamada (NCRC), and Hong-Gang Wang (USFCOM)	
MOLECULAR STUDIES ORIENTED TOWARDS CANCER	
Identification of THG1 as a Potential Suppressor of Testicular Tumorigenesis	97
Yuxin Yin	
Molecular Mechanism of Radiation-Induced Transformation of Human Bronchial Epithelial Cells by High-LET Radiation	100
Yong L. Zhao, Chang Q. Piao, and Tom K. Hei	
Expression of Transforming Genes and Allelic Imbalance in Human Breast Epithelial Cells Induced by High-LET Radiation	103
Debasish Roy, Gloria Calaf, and Tom K. Hei	
Aberrant Hypermethylation of the 14-3-3σ Gene is Associated with Gene Silencing in Breast Cancer	106
Anne T. Ferguson, Ella Evron, Christopher Umbricht (all from Johns Hopkins Oncology Center), Tej K. Pandita, Heiko Hermeking (JHOC), Jeffrey Marks (Duke University Medical Center), Andrew Futreal, Martha R. Stampfer (both from Berkeley National Laboratories), and Saraswati Sukumar (JHOC)	
STUDIES RELATED TO RADIATION THERAPY	
A More Robust Biologically Based Ranking Criterion for Treatment Plans	109
David J. Brenner and Rainer K. Sachs (University of California/Berkeley)	
Tumor Heterogeneity and its Effect on Parameters Estimated Using the Linear-Quadratic Model	111
David J. Brenner and Eric J. Hall	

THE RADIOLOGICAL RESEARCH ACCELERATOR FACILITY

The Radiological Research Accelerator Facility: An NIH-Supported Resource Center.....115

Director: David J. Brenner, Ph.D., D.Sc., Manager: Stephen A. Marino, M.S.

THE RADIATION SAFETY OFFICE

Radiation Safety Office Staff.....123

The Radiation Safety Office.....124

Director: Salmen Loksen, M.S., CHP, DABR

ACTIVITIES AND PUBLICATIONS

Professional Activities.....139

The Columbia Colloquium and Laboratory Seminars.....144
